**Bibliographische Daten**

---

The valve has a valve chamber between two pole shoes (12,13) and a valve body (4) movable within it between two end points, whereby the valve body is the armature for at least one permanent magnet and a control coil. At least two permanent magnets (30-) are arranged on both sides and next to the pole shoes. An independent claim is also included for refrigeration circuit and for a domestic machine with a refrigeration circuit.
